

## **INTEGRATION**

Our team has experience in not only software solutions, but also solutions that are based on hardware. From telecom solutions to systems and device management, high-performance hardware, custom hardware and more, we will not only help you investigate and build solutions for the future, but help you both support and enhance them as well.

## **RESOURCE AUGMENTATION**

In order to provide the best option based on your needs, our staff members can augment your current projects or develop custom solutions just for you. We can also augment our own talent by partnering with offshore resources at competitive rates to build your solution.

## **PROJECT MANAGEMENT**

After building solutions for decades, our team has project management and planning aptitude you can count on. Based on processes, whether Agile, Waterfall or any combination, our staff can bring expertise in project management and planning to our customers, either as a stand-alone service or one added with other services. By working with multiple domains in all capacities to provide software and hardware solutions to our customers, our team can also provide product management services for any number of products. Our role can be limited to a single release of the product or we can provide ongoing support.

## **IT MANAGEMENT**

Managing IT infrastructure for multiple companies is no issue for our team. We understand IT infrastructure and can evaluate objectives, make recommendations, implement and/or provide services as well as support. We are a trusted IT partner that ensures high-quality infrastructure and facilities are available now and into the future.

## **CONSULTING**

We provide consulting services for any software or combination of hardware and software projects. With decades of experience in a wide variety of domains, Saber Data can help any organization in areas related to software, hardware or IT-based technologies. Whatever your needs or wants - including technology, process or quality assessments - we can help.
